

HOW TO MEASURE FOR NEW PATIO SLINGS

All replacement slings ordered by Patio Paradise are made to customer specifications. Due to this fact, sling measurements need to be taken by the customer as accurately as possible. These instructions will provide you with the necessary details on how to take an accurate measurement of your outdoor patio furniture.

Patio Paradise recommends always measuring the actual chair frame whenever possible. Measuring existing slings removed from the chair frame typically yields inaccurate measurements as the sling has already been stretched and worn. Measurements may be taken on the chair frame with either the original sling installed or removed. However, in order to achieve accurate results, it is imperative that the rails of the frame and all spreader bars be intact and tightened before measuring.

Patio Paradise requires all customers seeking replacement slings to provide the length and width of the chair frame.

To arrive at the length, measure the length of the sling rail from top to bottom using a cloth measuring tape. Be sure that the measuring tape rests along the bend of the chair rail and does not move out of position while measuring.

Note: When measuring a chaise lounge, it is best to measure the length of the sling along the chaise rail. Chaise lounge bottom slings are not always made to fit along the entire length of the sling rail.

Measuring Width

In order to obtain the width of the chair frame, a measurement must be taken from center rail to center
